

FIRST VISIT FIRST TOOTH

A CDA EDUCATION PROGRAM

Presented by: Pam McFarlane, Daniella DeMaré, and Dr. Bob Schroth

Message from the Canadian Dental Association

- First Visit First Tooth (FVFT) website created and developed by the CDA
- Comprehensive powerpoint presentation developed by Dr. Ross Anderson, Chief of Dentistry, IWK Health Centre and Head, Division of Paediatric Dentistry, Dalhousie University
- FVFT program designed for:
 - Dentists and other oral health professionals
 - Family physicians and pediatricians
 - Nurses and nurse practitioners
 - Public health officials

- CDA sponsored interactive course incorporates both knowledge transfer and experiential learning
 - Can be modified to suit the presenter's own presentation style and audience

Objectives

- Highlight key messages of FVFT program
 - Showcase contents of FVFT program
 - Convey take home messages

Outline

- Good Oral Health Begins Before Teeth Arrive
 - How to Prevent Early Childhood Caries Tips for Parents
 - Celebrate a Child's First Tooth

- How Dentists Can Help Reduce Early Childhood Caries
 - Make an Infant's Oral Health a Priority
 - Risk Factors for Early Childhood Caries
 - Consequences of Early Childhood Caries
 - Importance of Fluoride

Outline

First Visit First Tooth Program

- Review of comprehensive powerpoint presentation
- Contents of the kit
- How to order FVFT program

Take Home Messages

- Review key messages of FVFT program
- Benefits and limitations of FVFT program

LESSON 1:

GOOD ORAL HEALTH BEGINS
BEFORE TEETH ARRIVE

http://www.firstvisitfirsttooth.ca

How to Prevent Early Childhood Caries (ECC)

http://www.firstvisitfirsttooth.ca

Tips for parents:

- Maintain a good diet while pregnant, as baby teeth begin to develop in first trimester
- Breastfeed if possible
- Never put a baby to bed with a bottle or sippy cup of milk or any other fluid other than water

Use a damp washcloth to wipe your baby's mouth after a feeding (Important for both breastmilk and formula)

How to Prevent Early Childhood Caries (ECC)

http://www.firstvisitfirsttooth.ca

Once a tooth erupts, clean it using a toothbrush

Celebrate your child's oral health routine by making it fun

 Start bottle weaning and introduce drinking from a cup by age 1

 If using a soother, use age-appropriate size and never dip in sweets

How to Prevent Early Childhood Caries (ECC)

http://www.firstvisitfirsttooth.ca

- Limit juice and other sweet drinks to 4 ounces or less per day
- Give water in between meals
- Eat a healthy diet containing foods rich in calcium and vitamin D to promote strong teeth
- Offer cheese, fruits, vegetables and nuts as snacks

Celebrate A Child's First Tooth!

http://www.firstvisitfirsttooth.ca

- A child's first tooth is a milestone and should be celebrated
- A child's first dental visit provides an opportunity for the dentist to begin a relationship with the child and family
 - Promotes a trusting relationship for continuity of care
 - Provides a reliable place to go in case of an emergency

Celebrate A Child's First Tooth!

http://www.firstvisitfirsttooth.ca

- Establishing a dental home at a young age is important
 - Teaches oral care from the start to promote healthy oral health status
 - Provides guidance for parents for optimal oral health

Questions?

http://www.firstvisitfirsttooth.ca

LESSON 2:

HOW DENTISTS CAN HELP REDUCE EARLY
CHILDHOOD CARIES

Make an Infant's Oral Health A Priority

http://www.firstvisitfirsttooth.ca

- Children should see a dentist within 6 months of when their first tooth erupts or by 12 months of age
- Regular dental visits should occur and be prioritized just as much as regular visits to a doctor
- Tooth decay can start as soon as baby teeth erupt in the mouth

Make an Infant's Oral Health A Priority

http://www.firstvisitfirsttooth.ca

- First dental visit by 12 months of age is critical for early diagnosis and prevention of tooth decay
- First dental visit also important for educating parents and caregivers
 - Provides information about good dietary habits
 - Importance of daily oral hygiene and regular professional dental care

Risk Factors for Early Childhood Caries

http://www.firstvisitfirsttooth.ca

- Enamel defects (i.e. white chalky spots) or cavities
- Visible plaque on teeth
- Frequent intake of sugary snacks or drinks between meals

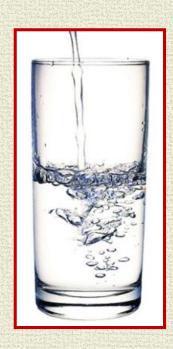

Risk Factors for Early Childhood Caries

http://www.firstvisitfirsttooth.ca

- Teeth are not brushed at least twice daily
- Premature birth and low birth weight children
- Parent or primary caregiver has tooth decay
- Living in a community without water fluoridation

Consequences of Early Childhood Caries

http://www.firstvisitfirsttooth.ca

- Untreated ECC has severe consequences:
 - Pain
 - Difficulty eating and sleeping
 - Speech difficulties
 - Poor self-esteem
- Untreated ECC also affects growth and ability to learn, communicate and socialize

Consequences of Early Childhood Caries

http://www.firstvisitfirsttooth.ca

- Studies show that children with severe ECC have an increased risk of:
 - Being anemic
 - Iron deficient
 - Vitamin D deficient
- A report from the Canadian Institute of Health Information stated that 31% of day surgeries for children 1-4 years of age is due to severe ECC

Importance of Fluoride

http://www.firstvisitfirsttooth.ca

- Community water fluoridation is an important investment for all age groups, especially children
 - Evidence shows that the health promoting effects of water fluoridation is a cost effective population health method of preventing tooth decay

Questions?

FIRST VISIT FIRST TOOTH

CDA EDUCATIONAL PROGRAM

http://www.firstvisitfirsttooth.ca

CDA Comprehensive Powerpoint Presentation

- Created to educate program participants on many topics including:
 - Defining Severe Early Childhood Caries (ECC)
 - Infant Oral Health Care
 - Patient Risk Assessment
 - Caries Management Protocol
 - What Can Dentists Do To Help?
 - Fluoride Varnish
 - How to Institute a Dental Home

INSERT ORGANIZATION LOGO HERE

First Visit, First Tooth

A Hands On Approach for Family Dental Practices and Oral Health Providers

INSERT ORGANIZATION NAME HERE

INSERT PRESENTER NAME HERE

Side Series developed by: Ross D. Anderson D.D.S. D.Red. M.Sc. FRCD (C) Chief of Dentistry, IWK Health Centre, Assistant Professor and Head, Program Director, Pediatric Dental General Practice Residency Division of Pediatric Dentistr Faculty of Dentistry, Dalhousie University

4

First Visit First Tooth

Course objectives

Customize presentation to your organization, name and credentials

By the end, you will be able to:

- Define (Severe) Early Childhood Caries (ECC/S-ECC) and understand the epidemiology of ECC.
- Describe how ECC/S-ECC and its sequelae affects the normal growth and development, health and behaviour of children.
- Describe the pathophysiology of ECC/S-ECC and recognize the clinical appearance of early carious lesions (white spots), late stage disease cavitated lesions and the sequelae of late stage disease.
- 4. Use a risk assessment tool to evaluate the risk of ECC in comorbid and typically developing children.
- 5. Provide comfort in examining an infant and toddler
- Initiate and provide key preventive strategies to prevent ECC through motivational interviewing
- Provide anticipatory guidance on an age base
- 8. Access web based learning resources on infant oral health
- 9. Have knowledge of common infant and toddler oral health conditions
- Understand the impact that trained physicians and other primary health care providers can have in ECC/S-ECC
- 11. Partner with trained physicians and other primary care providers
- 12. Provide therapeutic restorative based strategies to treat ECC/S-ECC when necessary

Defining Severe Early Childhood Caries (ECC)

Great use of pictures showing ECC

Infant Oral Health Care

Early Infant Oral Health Care

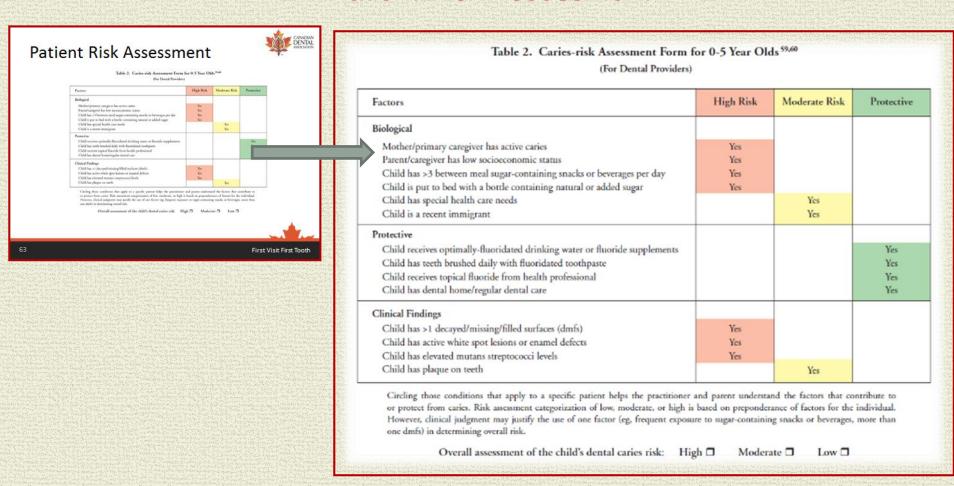

Rationale

- health supervision, not disease treatment; (paediatric) dentists as early interventionist
- old model: caries inevitable; treat effects of disease, then institute preventive (suppressive) care; OK to start at age 3 (when child is co-operative)
- new model; based on well baby clinic model; examine early; risk assessment; anticipatory guidance; true prevention
- early identification/intervention are cost effective and lead to better outcomes
 - Goepferd.S.: J Dent Child 53: 257- 266.1986

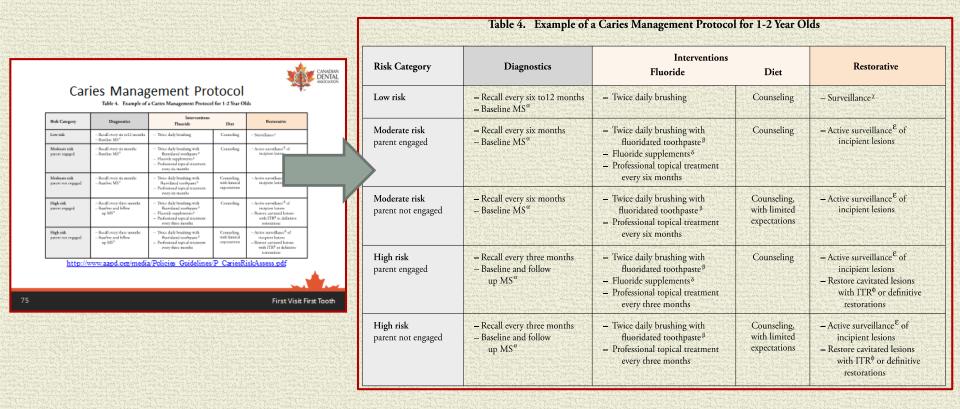

Patient Risk Assessment

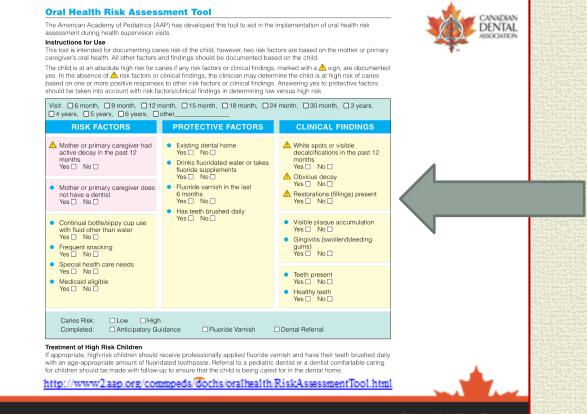

Great slide discussing factors for protective, moderate risk or high risk for caries

Caries Management Protocol

Great slide discussing an example of a caries management protocol

Caries Management Protocol

Another example
of a caries
management
protocol - available
online

What Can Dentists Do to Help?

What Can Dentists do to Help?

COUNSEL - DIET

Breast Feeding and ECC

- WHO, Health Canada and CPS recommendation that breast feeding to continue to 2 years of age
- Valaits, R ct al, A Systematic Review of the Relationship between Breastfeeding and Safe Childhood Cares, CJPH 91(6) 411 - 417, 2000

In between meal drinks

- sip n play and apple juice
 - "my best business partner", naturally acidic
 - Glissues
 - SIPPY CUPS
 - · Sit down to drink
- purpose hydration, filling upon milk and or juice provides false caloric intake, and poor appetite, iron deficiency anemia
- Tap Water is the Best in between meal drink past the age of a year
- AAP recommends no more than one 4 oz glass of juice a day (at breakfast)

First Visit First Tooth

Canada's Food Guide used in this slide is from 1992. This slide could include the most recent version from 2007 What Can Dentists and Allied Health Personnel do to help?

COUNSEL-DIET

Solids and Snacks

-nutritionally and dentally acceptable snacks-read labels

- good fresh veggies and fruits, cheddar cheese, pure Greek yoghurt
- sugar freegum with xylitol for Mom's
- Sugar free gum with Recalcident -Case in Phosphopeptide-amorphous Calcium Phosphate remineralizes subsurface lesions
 - Shen et al, Remineralization of Enamel Subsurface lesions by Sugar-free gum containing Casein Phosphopeptide-Amorphous Calcium Phosphate, JDR 80(12): 2066 - 2070, 2001
- not so good fruit snacks, chips, crackers, granola bars, junk, dried fruits, starches

99

What Can Dentists Do to Help?

What Can Dentists do to help?

- Self Study and Stay Current
- 2. Build Oral Health into your practice
 - Assess Patient Risk
 - Evaluate Patient Examination Technique
 - Ability to recognize ECC
 - 3. Counsel/Motivational Interviewing

Diet

Oral Hygiene/Proper use of Fluoride

Parenting Skills

Revaluate and counsel again

- 4. Apply fluoride varnishes to high risk children
- 3. Institute a "Dental Home" by age 12 months of age or earlier
- Advocacy on Public Policy/Join the CPS Oral Health Section

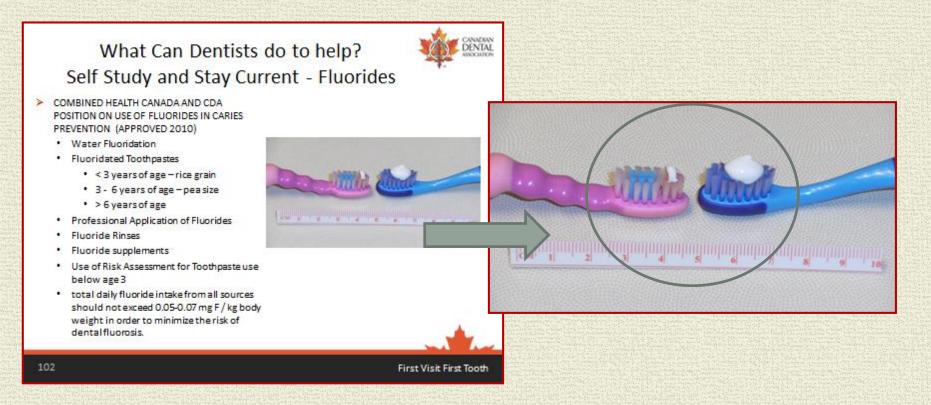

Great summary of what dentists do to help encourage optimal oral health

101

First Visit First Tooth

What Can Dentists Do to Help?

Excellent visual for appropriate amount of toothpaste for each age group

Fluoride Varnish

Professional Application of Fluoride Varnish

- 2.26% F; typical use 0.2 -0.5 ml = 5 -11 mg safe mode of delivery = 22,600 ppm
- 25% 75% caries reductions

How to Institute a Dental Home

How do I institute a "Dental Home" by 12 months of age or earlier?

- THE GP ADVANTAGE Womb to Tomb
- IN OFFICE
- Do you have a "pregnancy-list" for women in your practice
- (contact information, baby's due date, gender, if known.)
- Congratulations card and a baby toothbrush with a note to start brushing when the first tooth comes into the mouth
- (BE AWARE: not all pregnancies result in a live birth- a phone call to the family to determine the birth of a healthy baby is important.)
- In the note let them know that you look forward to seeing baby when their first tooth comes in or by their first birthday for the first visit
- encourage a 'bring the baby program' when Mom is in for her recheck
- Provide infant and toddler information (pamplets, multimedia) http://www.babyoralhealthpup.org/index.php

142

First Visit First Tooth

Could educate on "Free First Visit" program in Manitoba

How do I institute a "Dental Home" by 12 months of age or earlier?

Scheduling

143

- schedule to accommodate infant appointments and family centered care
- Consider scheduling 30-minute "infant exams" first thing in the morning. This will circumvent appointments around nap times.
- consider coordinating "infant exams" during slower practice times such as the first week of school or end-of-year testing.
- Periodicity of recheck schedule should be based on AAPD/AAP caries risk assessment tool
- Utilize fluoride varnish's for high risk patients

http://www.babyoralhealthprogram.org/index.php

First Visit First Tooth

Contents of the Kit

For Facilitators:

Certificate of Achievement, Reporting forms, Promotional posters

Disposable mirror, Pen light, Fluoride Varnish with micro brushes

Contents of the Kit

For Participants:

Toothbrushes and Toothpaste

Doll for Sim-Lab demonstrations

Assessment and Evaluation: For Facilitators

- Prepare a quiz to assess how much information participants learned
- Survey participants to see if they found the training beneficial
- Take suggestions made by participants into account for future presentations

Interested in the Program?

To order a kit:

- Please call 1-800-267-6354 or
- Complete a request form available at: http://www.firstvisitfirsttooth.ca/order-kit

To find a course in your area:

Please email firstvisitfirsttooth@cda-adc.ca

First Visit First Tooth Resource Fact Sheets

FIRST VISIT, FIRST TOOTH

NEW CONTINUING EDUCATION RESOURCE

A new First Visit. First Tooth continuing education course is now available. As an invaluable resource for those who are committed to seeing children reach their full potential, this half-day course gives participants hands-on training on ways to prevent or decrease the burden of illness associated with early childhood caries (ECC).

CANADIAN DENTAL ASSOCIATION DENTAIRE CANADIENNE

WHY IS THE TREATMENT OF EARLY CHILDHOOD CARIES IMPORTANT?

The Canadian Dental Association (CDA) supports first visit within the first year (or first tooth eruption) as a dental best practice to help reduce early childhood caries ECC.

A child's first visit by age one is critical for the early diagnosis and prevention of dental decay, to educate parents and caregivers about dietary habits, instil daily oral hygiene, establish a dental home and stress the importance of regular professional dental care.

Obtaining and maintaining good health in childhood is an important investment in a healthy population for the future.

The consequences of untreated ECC can be dire. Pain, difficulty eating and sleeping, speech difficulties and poor self-esteem may occur. Untreated ECC can affect growth and the ability to concentrate and function.

According to a report from the Canadian Institute for Health Information (CIHI), hospital outpatient dental surgery for ECC constituted 31% of all day surgery for children age 1 to 4, making it the leading cause of day surgery for children in this age group.

The quality of life of our youngest and often most vulnerable members of society can be seriously compromised and yet ECC is totally preventable.

WHAT CAN PARTICIPANTS EXPECT FROM THE FIRST VISIT, FIRST TOOTH CONTINUING EDUCATION RESOURCE?

Within two to three hours, participants who complete the course will be able to:

- · Define ECC and understand the epidemiology:
- Describe how ECC affects the normal growth and development, health and behaviour of children:
- Describe the pathophysiology of ECC and recognize the clinical appearance of early carious lesions (white spots), late stage disease cavitated lesions and the sequelae of late stage disease;
- Use a risk assessment tool to evaluate the risk of ECC in comorbid and typically developing children;
- Provide comfort in examining an infant and toddler;
- Initiate and provide key preventive strategies to prevent ECC through motivational interviewing;
- Provide anticipatory guidance on an age base;
- Access web-based learning resources on infant oral health:
- Have knowledge of common infant and toddler oral health conditions;
- Understand the impact trained physicians and other primary health care providers can have:
- Partner with trained physicians and other primary care providers;
- Provide therapeutic restorative based strategies to treat ECC when necessary.

WHAT IS INCLUDED IN THE RESOURCE?

Meant to be delivered within two to three hours, the interactive slide deck incorporates both knowledge transfer and experiential learning. It can be modified to suit the presenter's own material, presentation style, and geographic realities.

The resource kit includes:

- Toddler-sized doll for active sim lab demonstrations
- Toothbrushes
- · Fluoridated toothpaste
- Mirror
- · Pen light
- · Fluoride varnish
- · Reporting form
- · Certificates of achievement
- Poster
- · Packing list
- Shipping return label with return instructions

WHO CAN USE IT?

The First Visit, First Tooth continuing education kit can be delivered by dentists and pediatric dentists to other dentists, specialists, other oral health care providers, pediatricians, family physicians, nurse practitioners, nurses, and public health officials.

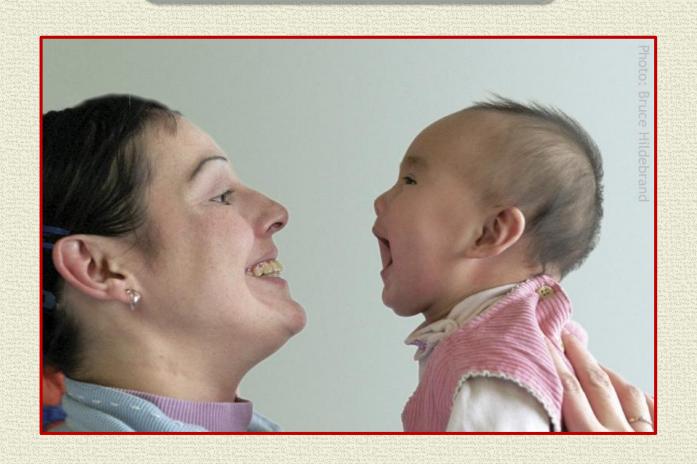

HOW CAN THE RESOURCE KIT BE ORDERED?

Order the First Visit, First Tooth continuing education kit by emailing FirstVisitFirstTooth@cda-adc.ca.

This resource has been developed by Dr. Ross Anderson, Chief of Dentistry, IWK Health Centre and Head, Division of Paediatric Dentistry, Dalhousie University.

Questions?

TAKE HOME MESSAGES

Key Messages of FVFT Program

1. Good Oral Health Begins Before Teeth Arrive

- How to Prevent Early Childhood Caries Tips for Parents
- Celebrate a Child's First Tooth

2. Dentists Can Help Reduce Early Childhood Caries

- Make an Infant's Oral Health a Priority
- Risk Factors for Early Childhood Caries
- Consequences of Early Childhood Caries
- Importance of Fluoride

Benefits of FVFT Program

Benefits of FVFT program

- Powerpoint has some great visuals for teaching (ECC, toothpaste amounts)
- Participants receive toothbrushes and toothpaste
- Educates more healthcare professionals on oral health
- Interactive component teaches knee-to-knee demonstration, application of fluoride varnish
- Builds more awareness of First Visit First Tooth program

Limitations of FVFT Program

- Limitations of FVFT program
 - Comprehensive powerpoint presentation is over 150 slides
 - Large time commitment needed for education
 - Many powerpoint slides have too much information listed
